

## **Litigation Tracking System:**

### **Role base access of application**

- i. Super admin: this user create workspace for firms and assign relevant roles and permissions to law firms. This user is responsible for maintain log of each entity in the application. This user can block the firm and can remove the form. This user should download all the relevant data and hand over to the form in the prescribed format. This user should also have the responsibility to migrate all the firms data to their own domain if needed.
- ii. Form user; form user has the permissions to create users of their form, users may be differed in riles like lawyer, Moharrir, registrar etc (please mention all the possible users and roles). The form user assign layers to the case. They have the facility to remove layer orr add layer to the case. (please elaborate further0
- iii. lawyer: each lawyer should be associated to multiple cases. Upon login lawyer can scroll the case documents. Lawyer can have the permission to view the document or download the document.
- iv. Moharrir role: this role is working for lawyers so if there is permission then this role can view the cases or can have permission to view the document or can download the document. But if there is no permission then this role can only enter the case data or can upload the document.

## Breakdown of the **Roles and Permissions Matrix: Litigation Tracking System**.

The term "*Form User*" has been updated to "**Firm Admin (Law Firm Owner/Partner)**" to better fit legal industry standards, and the user hierarchy has been expanded to cover all standard law firm roles.

### 1. Overall Role Hierarchy & System Overview

Access follows a strict top-down hierarchy. Higher roles inherit configuration rights, while operational roles are restricted to specific case assignments.

- Detailed diagram

## 2. Comprehensive User Roles Breakdown

The **Firm User** tier is broken down into five distinct law firm roles:

- **Firm Admin (Law Firm Owner/Partner):** Has total control over the firm's workspace, billing, billing rates, and firm-wide user management.
- **Partner / Senior Lawyer:** Supervises multiple case teams. They assign primary lawyers to cases, approve critical filings, and view high-level firm analytics.
- **Associate Lawyer:** The day-to-day legal driver. They draft pleadings, upload evidence, track deadlines, and log billable hours for their assigned cases.

- **Moharrir (Legal Clerk / Data Entry Operator):** The administrative backbone. They manage court diaries, track next hearing dates, file paperwork, and handle data entry.
- **Intern / Paralegal:** Temporary or junior staff who assist with research and document sorting. They typically have strict read-only or draft-only permissions.

### 3. Granular Roles & Permissions Matrix

| Module / Action                     | Super Admin | Firm Admin / Senior | Partner | Associate Lawyer | Moharrir (With Perms) | Moharrir (No Perms) | Intern / Paralegal                                                                               |
|-------------------------------------|-------------|---------------------|---------|------------------|-----------------------|---------------------|--------------------------------------------------------------------------------------------------|
| Create/Block/Remove Firms           | ✓           | ✗                   | ✗       | ✗                | ✗                     | ✗                   | ✗                                                                                                |
| System-Wide Audit Logs              | ✓           | ✗                   | ✗       | ✗                | ✗                     | ✗                   | ✗                                                                                                |
| Data Migration & Backup Export      | ✓           | ✗                   | ✗       | ✗                | ✗                     | ✗                   | ✗                                                                                                |
| Create/Manage Firm Users            | ✗           | ✓                   | ✗       | ✗                | ✗                     | ✗                   | ✗                                                                                                |
| Assign/Remove Lawyers to Cases      | ✗           | ✓                   | ✓       | ✗                | ✗                     | ✗                   | ✗                                                                                                |
| View Case Directory (Firm-Wide)     | ✗           | ✓                   | ✓       | ✗                | ✗                     | ✗                   | ✗                                                                                                |

| Delete Case                         | ✗           | ✓                   | ✓       | ✗                | ✗                     | ✗                   | ✗                                                                                                |

## 4. Detailed Functional Responsibilities per Role

### I. Super Admin (Platform Owner)

- **Workspace Provisioning:** Multi-tenant isolation. Creates isolated databases or schemas for new law firms upon onboarding.
- **Data Custody & Export:** Responsible for full SQL/NoSQL data dumps + cloud storage bucket contents (PDFs, images) zipped into a prescribed format (e.g., .zip containing organized folders and a CSV inventory) to hand over if a firm leaves.
- **Domain Migration:** DNS configuration management. Facilitates shifting data to a firm's custom domain (e.g., `://myfirm.com`) via automated container/database migration scripts.
- **Immutable Audit Logging:** Maintains a system-wide log of every API call, login attempt, data modification, and deletion for compliance and security.

### II. Firm Admin (Workspace Owner)

- **User Lifecycle Management:** Invites, activates, deactivates, and sets user profiles for all employees within their specific workspace.
- **Case Delegation Engine:** Links legal talent to specific clients. They can instantly revoke a lawyer's access to a case if they leave the firm or if conflict of interest arises.
- **Workspace Customization:** Sets up custom case categories (e.g., Civil, Criminal, Corporate), custom billing tags, and firm branding.

### III. Lawyer (Associate / Partner)

- **Assigned Case Scope:** Can *only* view, search, and scroll through documents belonging to cases where they are explicitly added to the legal team.
- **Document Interaction:** Read, preview, and download pleadings, evidence, motions, and court orders.
- **Activity Logging:** Records legal notes, client updates, and court proceeding summaries immediately following a hearing.

#### IV. Moharrir (Legal Clerk / Data Entry)

This role features a **conditional toggle** controlled by the Firm Admin or Lead Partner

- **Scenario A (Restricted Mode - No Permission):** Actively blocked from reading sensitive client files or downloading legal strategies. The UI limits them strictly to data entry grids. They type in cause lists, next hearing dates, judge names, and upload scanned raw files (like certified copies) without being able to view or download them after submission.
- **Scenario B (Elevated Mode - With Permission):** Temporarily or permanently granted view/download rights. This allows them to proofread drafted notices, compile case files for court packages, and verify that the correct documents match the electronic case file.

### 5. Recommended Security Controls

1. **Row-Level Security (RLS):** Ensure that databases filter case queries dynamically so that an Associate Lawyer from *Firm A* can never guess a URL string to access data from *Firm B*, or even an unassigned case within *Firm A*.

2. **The "Moharrir Blind Upload" Feature:** Programmatically, when a restricted Moharrir uploads a document, the application should process the file via an API write-only endpoint. Once the upload success status returns 201 Created, the "View" and "Download" buttons must be grayed out and disabled on their UI dashboard.
